

Person ID : 499696

Encounter ID : 7923927

Event Title : CT CHEST1

Performed on Date : 07-APR-2006 08:42:00

MRN Number :528404

CT chest:History: Loculated effusion recurrent right-sided pleural effusion nowwith pleurex catheter in place.Technique: Multiple axial images of the chest were performed. 5 mmsections were taken through the entire chest.No IV contrast was given to this patient.Compared to 3/14/2006.Finding: Again, there is a loculated a moderate right-sidedpneumothorax with multiple foci of air within the pleural spaceprimarily anteriorly but also loculated with in this pleuralcollection when compared to the prior study there has been is slightimprovement in the size of pleural effusion. There still a moderateamount of atelectatic lung noted in the lower lobe as well as in themiddle lobe to a lesser extent air-fluid also atelectatic.The central airways are patent. There is no evidence ofsupraclavicular, mediastinal, axillary or hilar lymphadenopathy. Theheart is normal size. There is a pacemaker in place. There is noevidence of pericardial or pleural effusions.There is a 5 mm nodule in the left lower lobe, not changed from theprior study compare current study image number 39 with prior studyimage # 40.There is a fracture of the posterior right 6th rib.Incidental imaging of the upper abdomen is unremarkable.

Impression:There is atelectasis in the right lower lobe with a pleurex catheterin place. There is atelectasis and in the right lower lobe andscattered through the rest of the right lung. Air is noted within thepleural space likely related to this loculated pleural effusion withcatheter in place. When compared to the prior study the size of thisright-sided pleural effusion has slightly decreased. There is a newdisplaced right-sided rib fracture as described above.There is a 5 mm nodule noted in the left lower lobe.

Attending Radiologist: MOORE, WILLIAM

Ordered By: BILFINGER, THOMAS

Order Date: April 7, 2006 08:30

Completion Date: April 7, 2006 08:42

Encounter Number: 010034162494
