

REPORT_PERSONID_446375ENCOUNTERID_10443323

Person ID : 446375

Encounter ID : 10443323

Event Title : RIBS/RIGHT

Performed on Date : 30-APR-2008 22:50:00

MRN Number :30085540

TECHNIQUE: Five views of the right ribs without comparison.FINDINGS: There is no evidence of fracture. The trachea is midline.The cardiac silhouette appears within normal limits. There is no evidence of pulmonary vascular congestion, pleural effusions, focal consolidation or pneumothorax. The diaphragms are smooth in contour.The aorta is tortuous and calcified. There are 2 air-fluid levels in the lower thorax consistent with hiatal hernia. Paraesophageal hiatal hernia cannot be excluded. Please correlate clinically. Osteopenia limits fracture detection. Degenerative changes of the thoracic spine are apparent.

IMPRESSION: No rib fractures. No acute cardiopulmonary process. 2 air-fluid levels in the lower thorax consistent with hiatal hernia. Paraesophageal hiatal hernia cannot be excluded. Please correlate clinically. Addendum # 1 by Maryanna Mason on 05/02/2008 7:49 AM** AP chest view included in technique portion of this procedure.**

Attending Radiologist: MASON, MARYANNA
