

Person ID : 388344

Encounter ID : 10096277

Event Title : CT FACIAL BONE MANDIBLE W/O CO

Performed on Date : 18-JAN-2008 11:37:00

MRN Number :30072509

HISTORY: History of mandibular fracture. Status post reduction. TECHNIQUE: Axial CT sections with coronal and sagittal as well as 3-D volume rendering images. FINDINGS: The prior CT dated 1/9/2008 is utilized for comparison. There is interval placement of upper and lower dental braces. The previously noted nondisplaced fracture of the angle of the mandible as well as the right parasymphseal nondisplaced fracture of the right mandible remain in alignment. The fracture at the ankle left mandible again appears to be traversing the mandibular canal. The temporal mandibular joints appear intact. There also appears to be a nondisplaced fracture involving the lateral anterior wall of the left maxillary sinus adjacent to the left zygomatic bone with adjacent mild mucosal thickening, unchanged. There is also minimal diffuse mucosal thickening in the left maxillary sinus. The previously noted fluid in the left maxillary sinus has resolved. There is narrowing of the left osteomeatal unit by mucosal thickening. There is a small nodular mucosal thickening in the right maxillary sinus. Minimal mucosal thickening is again seen in the bilateral ethmoidal sinuses. There is again a minimally displaced fracture of left side of the nasal bone, unchanged.

IMPRESSION: Interval placement of upper and lower dental braces or fixation device. No significant change in the nondisplaced fractures. Resolution of the fluid in the left maxillary sinus. Minimally displaced fracture of the left side of the nasal bone and nondisplaced fracture of the anterior wall of the left maxillary sinus, unchanged. Narrowing of the left osteomeatal unit by mucosal thickening.

Attending Radiologist: ROQUE, CLEMENTE

Ordered By: STERN, ANNA

Order Date: January 18, 2008 12:15 AM

Completion Date: January 18, 2008 11:37 AM

Encounter Number: 010041004614

Accession Number: 2826455
