

REPORT_PERSONID_1136746ENCOUNTERID_9391310

Person ID : 1136746

Encounter ID : 9391310

Event Title : CHEST,AP PORTABLE

Performed on Date : 01-AUG-2007 12:56:00

MRN Number :30365803

Technique: Single view the chest. Findings: Limited portable AP view of the chest, as compared to the priors dated 7/29/2007, again demonstrates multiple metastatic lesions throughout both lung fields. There has been an interval improvement in right-sided pleural effusion. Bibasilar linear atelectasis is seen. A tiny pleural effusion is seen on the right side. The left costophrenic angle is not visualized on this examination. Can't exclude an effusion on the left side. Again seen are a right-sided central venous catheter, a left-sided dialysis catheter, and a right-sided chest tube. These are unchanged in position as compared to prior study.

Impression: Significant improvement in right-sided pleural effusion.

Resident Radiologist: MIR, YASSER

Attending Radiologist: SPECTOR, SOLOMON
